/dashboard

/book

Main UI files:

app/(dashboard)/book/page.tsx

app/(dashboard)/book/booking-form.tsx

PRIMARY FLOW

Booking Request Lifecycle

This is the central path the app executes when a user books fueling.

1. Client form

booking-form.tsx

Location, partner stations, Google station discovery, vehicle

⋮

2. Server validation

actions.ts

Validates station, slot, vehicle, request type, and special inst

⋮

3. Database write

fuel_requests + vehicles + service_slots Stored in Supabase Postgres

API ROUTE

Discovery

/api/places/nearby-gas-stations

Calls Google Places API (New)

Returns nearby stations for discovery only

GOOGLE_MAPS_API_KEY

STORAGE

Core tables

Schema + migrations

Key rule: Google Places = discovery. Supabase partner stations + slots = booking.
